HDMI FIBER CABLE

Quick Setup & Troubleshooting Guide

Get connected. Get the best performance.
Solve common issues with ease.

This guide helps you set up your HDMI fiber cable and solve common issues. Please read it carefully before use.

1 Before You Connect

1 Directional

This is a directional cable.
Connect SOURCE → DISPLAY.

2 Long-distance optical cable

Handle with care. The fiber inside is sensitive to bending, pulling and crushing.

3 Check your devices

Your source and display must support the desired resolution and refresh rate.

2 How to Connect

DISPLAY → Source ✕

Do not reverse the connection.

3 Get the Best Performance

For 4K / 8K / High Refresh Rate

1. **Connect directly from source to display.**
   Avoid unnecessary switches or splitters.
2. **Use compatible HDMI ports.**
   Make sure your devices have HDMI 2.0/2.1 (or higher) ports.
3. **Select the correct HDMI input.**
   Use the HDMI port your cable is connected to.
4. **Set the desired resolution/refresh rate.**
   Adjust the settings in your device and display menu.
5. **Enable HDR/VRR only when supported by all devices.**
   Some features require compatible devices and settings.

4 No Signal?

NO SIGNAL

1. Is the direction correct? NO → Reverse the cable.
2. Are both connectors firmly inserted? NO → Reconnect both ends.
3. Correct HDMI input selected? NO → Select the right input.

YES

Still no signal?

- Restart source + display.
- Test 1080p/60Hz.
- Remove switch/AVR/splitter.
- Try another HDMI port.
- Contact Support.

5 Flickering / Black Screen

If the picture flickers or goes black:

1. Lower resolution/refresh rate temporarily. — 4K → 1080p
2. Disable HDR/VRR temporarily. — HDR VRR ⊗
3. Check HDMI ports.
4. Remove intermediate HDMI devices. — Switch, Splitter, AVR
5. Reconnect both ends.
6. Restart both devices.
7. Test another source/display.

6 No Audio / ARC / eARC

Make sure:

- Both TV and soundbar/AVR support ARC/eARC.
- Use the correct HDMI port (marked ARC/eARC).
- Enable ARC/eARC in your TV settings.
- Check audio output settings (e.g., PCM or Bitstream).

If there is still no sound, try using PCM first to verify the connection.

7 Cable Installation

BEFORE PERMANENT INSTALLATION

TEST THE CABLE BEFORE RUNNING IT THROUGH THE WALL.

Recommended Installation Process

Unbox → Connect → Test → Confirm 4K/8K performance → Permanent installation

IMPORTANT HANDLING

Recommended

Keep the cable in a gentle curve during installation.
